

## ASCME PROJECT

Study on the effects of adding a stimulant medication (Vyvanse) and a behavioral intervention (contingency management) for reducing methamphetamine use

# Participants sought

**Are you a regular user of methamphetamine (meth, crystal meth, side, jib, tina) and want to cut down or stop using?**

**Are you between 18 and 55 years old?**

### YOUR ROLE

Come to the clinic located in the St. Paul's RAAC weekly for appointments. At these appointments you will be asked to fill out questionnaires, participate in treatment sessions and do other study activities. You will also need to pick up the medication weekly and take it as directed by the study doctor.

### DURATION

Up to 24 weeks

We are recruiting until May 2025

Your participation remains confidential

Monetary compensation offered

**There will be no cost associated with the treatments.**

**To PARTICIPATE or for any questions, contact us:**

**Phone or text:** 236-688-7273

**Drop in:** St. Paul's Hospital Rapid Access Addiction Clinic

**Email:** [sahar.shahidi@bccsu.ubc.ca](mailto:sahar.shahidi@bccsu.ubc.ca)

Research project led by Dr. Paxton Bach (Principal Investigator) at the University of British Columbia.
